**Mathematics for All: A Concept Note**

The objective of mathematics in schools is to nurture the thinking skills among children. There are two perspectives of school education, one is to teach in order to turn out employable and the other is to develop the critical thinking and creativity among children. Moreover, NCFSE 2023, NCF 2005 recommends the processes of mathematics learning to make every child to enjoy mathematics, pose meaningful problems and develop mathematical thinking. The mathematics teachers therefore have a greater role to play. Developing mathematical prowess would go a long way in developing skills in other subjects like science and information and communication technologies, the language of which is mathematics. For this we need to work hard and improve the learning environment. This workshop cum seminar is a step towards this vision.
